Education

McMaster University **2025 – 2029**
Honours Bachelor of Applied Science, Computer Science (Co-op) *Hamilton, ON*

Experience

AI Programmer **Jun – Sep 2026**
Prepr Foundation *Toronto, ON (Remote)*

- Fixed a **critical production security vulnerability** that exposed users' personal data to logged-out requests, adding authentication checks across **11 Laravel API resources**.
- Gave the team one source of truth for validation across a **1,200+ file PHP/Laravel** codebase by consolidating duplicated name, email, and record checks into **reusable validation rules**.
- Unblocked local development for a **4-person team** by fixing recurring Docker crashes caused by database seeding, and flagged OAuth redirect and XSS vulnerabilities during a security audit.

AI / Backend Developer **May – Jul 2026**
Aeternum *Remote*

- Prevented users from seeing records they weren't allowed to access in an **AI search pipeline (RAG)** over private data by enforcing **per-record permission checks** *before* search runs.
- Improved search relevance by cutting weak, near-miss matches from results, tuning a **similarity threshold** on **vector embeddings** in **PostgreSQL (pgvector)**.
- Shipped the platform's **FastAPI** search and AI-answer endpoints as **sole backend developer**, owning **14 tickets** end to end from design through code review.

Workflow & Integration Lead **Apr – Jun 2026**
WareShare *Remote*

- Prevented duplicate charges and duplicate customer emails in production by designing a **booking-to-payment workflow** with **Stripe** that safely handles repeated payment events, built on **Cloudflare Workers**.
- Expanded automated email coverage from **7 to all 16** required flows across signup, booking, and invoicing by building a notification system with **Resend**, rolled out safely behind feature flags.
- Kept warehouse availability accurate across overlapping bookings by building a **real-time reservation engine** that tracks space across **3 booking statuses** and powers the booking calendar.

AI Developer (Team Lead) **Feb – Mar 2026**
Workplace Edge *Remote*

- Shipped a production AI coaching chatbot for a live eLearning client in **4 weeks** by leading a **3-person team**, owning the **Express/TypeScript** API, **Turso (libSQL)** data layer via Prisma, and **Gemini 2.5 Flash** integration.
- Kept answers based on the client's own curriculum instead of generic AI advice by loading all **20 lesson plans** directly into the model's context, with no extra search infrastructure needed.
- Kept the chatbot on-topic and safe with a **4-category intent classifier** and a safety layer that strips personal information before messages are stored.

Founder & CTO **2024 – 2025**
Advancing Future Innovators (AFI) *Ontario*

- Delivered programming education to **30+ students per session** by founding a nonprofit and building school partnerships, running operations and volunteer coordination across multiple local schools.

Technical Skills

Languages: Python, JavaScript (ES6+), TypeScript, PHP, C, SQL, HTML/CSS, Haskell
Frameworks: React 18/19, FastAPI, Hono, Express, Node.js, Laravel, Prisma, Tailwind CSS, Vite
Data & Infra: PostgreSQL, pgvector, Turso (libSQL), MongoDB Atlas, Supabase, Cloudflare Workers/D1/R2, Vercel, Docker
Tools & AI: Git, GitHub Actions, Stripe, Jira, Cursor, Gemini API, RAG, Vector Embeddings, Prompt Engineering

Leadership / Extracurricular

NASA Space Settlement Design Contest: Grand Prize (9,000+ participants, 12 countries). **Hackathons:** The Record (Best Use of ElevenLabs), SEED (Best UI), C.A.P.T.C.H.A. (solo). **Also:** MEC Debate (2nd), Mac AI Club, EWB, Socratica.
